## Advanced Features

As mentioned earlier, a functional screen can be developed within 5 minutes using our standard features. More sophisticated developers, however, may want further customization. For example, users may want to change button names, hide or show buttons, add business rules, etc. In this chapter, we will address functionality more suitable for developers who have more advanced programming knowledge and experience, to better handle situations where business rules require understanding of standard programming languages, such as SQL, C# or JavaScript.

**Using this program, sophisticated developers may perform some of the following advanced functions:**

- Screen criteria setting
- Screen layout grouping
- Button characteristic override
- Server rule setup
- Web rule setup
- Client rule setup
- Advanced rule setup
- Message center maintenance
- Automatic human language translation

## Screen Criteria Setting

In order to streamline data transfer between the data server and the web server, developers may specify a range of commonly used criteria for a desired screen. Users can filter based on the specified criteria, and only data that meets those criteria will be retrieved from the database. This feature significantly reduces unnecessary traffic, improving performance without sacrificing quality.

There are two types of screen criteria:

1. User Defined Criteria: Users create and name their own SQL.
2. Mapped Criteria: Users can map criteria (one-to-one) to a column on the table specified for that screen.

### User Defined Criteria

This is most useful for complex criteria that may involve some hard-coded constants to be specifically filtered. Users write their own SQL, and attach a culture-dependent name to it. Each name specified will be listed on the drop-down at the top of the screen (to the right of the criteria section), and can be ordered in any sequence the user desires.

Command: Client Tier -> Screen Filters

Screen Filters

Export RichText New Copy Undo All Save Delete ?

AdmUsr - Active Original Users

Filter ID: 1

Screen\*: User Manager

Filter Name\*: Active Original Users

Filter Clause\*: Active = 'Y' AND ExtPassword is null

Filter Order\*: 10

Module: Administration

Filter Labels

Culture*	Filter Header*	Delete
U.S. English	Active Original Users	Delete
Mainland Chinese	原来活跃用户	Delete
French	Utilisateurs originaux actifs	Delete

The result is shown as follow on the right:

The screenshot shows the 'User Manager' application interface. At the top, there are buttons for 'Export', 'RichText', 'New', 'Copy', 'Undo All', 'Save', and 'Delete'. Below these are input fields for 'Email Address', 'User Name', and 'User Group', along with a 'Quick Filter' dropdown set to 'Active Original Users'. The main section displays the details for user 'Nelson Lin' (User Id: 55). Fields include 'Login Name\*', 'User Email' (nelson.lin@robocoder.com), 'User Name', 'User Groups\*' (Accountant, Anonymous, Business Developer, Guest), 'User Culture\*' (U.S. English), 'Default Company' (robocoder corporation), 'Default Project', and 'Default System\*' (Administration). There are also checkboxes for 'Internal User' and 'Technical User', and an 'Impersonating\*' field set to '1'.

The latter criteria type consists of a two-steps process. First, a screen criterion is defined (as shown below), which is then mapped to the appropriate screen column with the appropriate operator.

## Screen Criteria Defined

Command: Client Tier -> Screen Criteria

The screenshot shows the 'Screen Criteria Defined' application interface. It has the same top buttons as the previous screenshot. The 'Screen' dropdown is set to 'User Manager'. Below, there are fields for 'AdmUsr 10: Email Address' and 'Module: Administration'. The main configuration area includes: 'Screen\*' (User Manager), 'Criteria Group\*' (\*C-Horizontal L-Vertical), 'Criteria Column\*' (Usr - UsrEmail), 'Tab Index\*' (10), 'Display Mode\*' (TextBox), 'Justify\*' (Left), 'Column Size (px)' (100), 'List Row Size', 'DropDown Key Column', 'DropDown Ref Column', 'DropDown Sort Column', and 'Require Validation' (unchecked). At the bottom, there is a table with columns 'Culture\*', 'Column Header', 'Width', and 'Delete'. The table contains three rows: 'U.S. English' with 'Email Address', 'Mainland' with '电子邮箱', and 'Chinese' with '电子邮箱'. Each row has a 'Delete' link.

To add new criteria to a screen, first select the appropriate screen from the criteria section. Notice that this dropdown selection is actually a screen criteria defined by the same action. This is the power of self-generation as Rintagi is also built from this meta-data.

One built-in service worth mentioning is that the application generated will always memorize each user's last selection for each individual screen or report and will be filtered accordingly next time the screen or report is invoked by the same user.

If the selected screen already has some criteria, the search list below the criteria section will list all existing criteria. As with all other screens, the user may choose from a blank row to add a new row or copy an existing row to be modified. Some rows may not accept exact duplicate. In which case the unique column should be identified and modified prior to duplicating to the database.

Schema Characteristic	Description
Screen	This is the screen this criterion applies.
Criteria Group	This is the criteria group this criterion belongs; all groups should root from the same default group. This will be covered in details in the following topic.
Criteria Column	The column that this criteria should influence. This will be used to determine the data type of this criterion.
Tab Index	This is the tab order of this criterion at a default interval of 10. If and when not assigned a value or the last digit is not zero, an automatic reorder will take place.
Display Mode	This is the display type of this criteria column.
Justify	This is the justification of column display (Left, Right or Center).
Column Size (px)	The column size of this criterion in pixels.
List Row Size	The number of rows to show if this criterion is a list-box. Most of the time this is empty.
Dropdown Key Column	The key column of the dropdown, combo-box, list-box, radio-button.
Dropdown Ref Column	The display column of the dropdown, combo-box, list-box, radio-button.

Dropdown Sort Column	When not specified, the reference column will be used for sorting.
Require Validation	When checked, this criterion becomes mandatory.
Culture	The culture for this criteria label, default culture should present on one of the rows.
Column Header	The heading for this criteria column is 50 characters or less.
Width	The width of this heading in pixels if default is not applicable.

## Screen Criteria Mapping

Command: Client Tier -> Screen Criteria Mapping

The criteria map determines the filter operation based on a simple operator. Only four pieces of information are required for each criterion. (Note: Code generation will produce an error if this step is not performed).

Schema Characteristic	Description
Screen	Criteria and columns on this screen will be mapped.
Database Column	Database column to map the criteria to.
Operator	Mapping operator between database column and criteria.

Criteria Column	Criteria to map to the selected database column.
-----------------	--

## Screen Layout Grouping

Although not a graphical operation, this feature captures all of the necessary functionality that enables screen criteria and screen columns to be presented in an organized manner. For example, columns or criteria may be displayed side-by-side in two columns by simply defining two groups within a group and specifying that the content (the two groups) be displayed horizontally. For the most effective use of this feature, the user should storyboard the layout prior to defining the groups.

Command: Client Tier -> Screen Grouping

The screenshot shows the 'Screen Group' configuration window. At the top, there are buttons for 'Export', 'RichText', 'Undo All', and 'Save'. Below these is a dropdown menu for 'Screen: User Manager'. A 'Module: Administration' dropdown is also visible. The main area contains a table with the following columns: Screen\*, Group Type\*, Group Index, Parent Group\*, Group Name\*, Content Vertical\*, Label Vertical\*, Border Width\*, Style, and Delete. The table lists three groups for the 'User Manager' screen, all of type 'Screen Column'. The first group has an index of 0.0 and is the parent group. The second and third groups have indices 0.0.0 and 0.0.1 respectively, and are children of the first group. The 'Content Vertical\*' and 'Label Vertical\*' columns have checkboxes, and the 'Border Width\*' column has a numeric input field set to 0.

Screen*	Group Type*	Group Index	Parent Group*	Group Name*	Content Vertical*	Label Vertical*	Border Width*	Style	Delete
User Manager	Screen Column	0.0	*C-Vertical L-Horizontal	Usr T1	<input type="checkbox"/>	<input type="checkbox"/>	0		<a href="#">Delete</a>
User Manager	Screen Column	0.0.0	Usr T1	Usr T1G1	<input checked="" type="checkbox"/>	<input type="checkbox"/>	0		<a href="#">Delete</a>
User Manager	Screen Column	0.0.1	Usr T1	Usr T1G2	<input checked="" type="checkbox"/>	<input type="checkbox"/>	0		<a href="#">Delete</a>

Schema Characteristic	Description
Screen	The screen that this group applies to.
Group Type	Selects the appropriate criteria/column type.
Group Index	Computed based on the order of columns assigned.
Parent Group	The parent screen group. Users should ensure the same root for all groups within this screen.

Group Name	The unique name for the group within this screen.
Content Vertical	Check this if content should be stacked vertically.
Label Vertical	Check this if label should be on top of the corresponding content.
Border Width	Number of pixels for the group box border. (Example: “Zero” leaves the group box borderless.)

## Button Characteristic Override

Action buttons can be styled and characterized at two levels. These buttons are predefined to serve any screen, report or wizard. The “Button Defaults” screen allows the button names and tool tips to render in the human language desired as the default. The “Button Overrides” screen can then override these button characteristics.

It is strongly advised not to add more buttons or make changes to this screen as next Rintagi upgrade may remove any modification made to this screen.

### Button Defaults

Button Characteristic Default				
<div> <div>Export</div> <div>RichText</div> <div>Undo All</div> <div>Save</div> <div></div> <div></div> <div></div> </div>				
Culture: U.S. English				
<div> <div>30</div> <div>1 of 2</div> <div>Filter: All</div> <div>On</div> </div>				
Culture*	Button Type*	Button Name*	Button ToolTip*	Delete All
U.S. English	Report Clear Criteria	Clear	Press this to clear criteria section	<a href="#">Delete</a>
U.S. English	Report Customization	Customize	Press this to customize this report further	<a href="#">Delete</a>
U.S. English	Report Export Doc	Word	Press this to view results in a Microsoft Word file	<a href="#">Delete</a>
U.S. English	Report Export Pdf	PDF	Press this to view results in an Adobe PDF file	<a href="#">Delete</a>
U.S. English	Report Export Rtf	RichText	Press this to view results in a Rich Text format (RTF) file	<a href="#">Delete</a>
U.S. English	Report Export Txt	Export	Press this to export as tab-delimited to flat file or Excel Spreadsheet	<a href="#">Delete</a>
U.S. English	Report Export Xls	Excel	Press this to view results in an Excel Spreadsheet	<a href="#">Delete</a>
U.S. English	Report Export Xml	Excel	Press this to view results in a XML-formated Excel SpreadSheet version 2000 and beyond	<a href="#">Delete</a>
U.S. English	Report Global Search	Search	Press this to show global criteria section	<a href="#">Delete</a>
U.S. English	Report Print	Print	Press this to view results on screen and print to the printer selected	<a href="#">Delete</a>
U.S. English	Report Show Criteria	Criteria	Press this to show criteria section	<a href="#">Delete</a>
U.S. English	Report View	View	Press this to view results on screen	<a href="#">Delete</a>
U.S. English	Screen Clear	Clear	Press this to clear this form for the same record and assume initial defaulted values	<a href="#">Delete</a>
U.S. English	Screen Clear Criteria	Clear	Press this to clear criteria section	<a href="#">Delete</a>
U.S. English	Screen Copy	Copy	Press this to copy the current contents to a new form	<a href="#">Delete</a>
U.S. English	Screen Copy & Save	Copy&Save	Press this to copy the current contents to a new form and create this record	<a href="#">Delete</a>
U.S. English	Screen Delete	Delete	Press this to delete this record permanently	<a href="#">Delete</a>
U.S. English	Screen Export Rtf	RichText	Press this to export all data based on criteria as rich text to an RTF file or to Microsoft Word	<a href="#">Delete</a>
U.S. English	Screen Export Txt	Export	Press this to export all data based on criteria as tab-delimited to flat file or Excel Spreadsheet	<a href="#">Delete</a>

These become basic default characteristics for action buttons if there is no override. Overrides display using a desired image, text, etc. Many buttons from the above are

not visible as default. Grid import is one of them. You may elect those buttons to override and assign web-rules to these buttons with your desired characteristics.

## Button Overrides

Button Characteristic Override

Culture: U.S. English

10 1 of 2 Filter: All On

Culture*	Screen	Report	Wizard	Button Type*	Alternate Name	Alternate Tool Tip	Visible*	Image*
U.S. English	Change Password			Screen Export Txt			<input type="checkbox"/>	<input type="checkbox"/>
U.S. English	Change Password			Screen Export Rtf			<input type="checkbox"/>	<input type="checkbox"/>

U.S. English	Report Generator			Screen Export Txt			<input type="checkbox"/>	<input type="checkbox"/>
U.S. English	Report Generator			Screen Save		Press this to save this record permanently and generate report definitions for advanced handling	<input checked="" type="checkbox"/>	<input type="checkbox"/>
U.S. English	Report Generator			Screen Preview		Press this to preview this report after save button is pressed	<input checked="" type="checkbox"/>	<input type="checkbox"/>
U.S. English	User Group			Screen Hide Import Panel			<input checked="" type="checkbox"/>	<input type="checkbox"/>
U.S. English	User Group			Screen Show Import Panel			<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Schema Characteristic	Description
Culture	The culture this button override represents.
Screen	The screen this button characteristic will override, if appropriate
Report	The report this button characteristic will override, if appropriate.
Wizard	The wizard this button characteristic will override, if appropriate.
Button Type	The button type this override should apply.
Alternate Name	The alternate name to be displayed on this button type. (Blank means no change to the default.)
Alternate Tool Tip	The alternate tool tip for this button type. (Blank means no change to default.)

Visible	Check this if button type should be visible.
Image	Check this if button type should be an image.
Image URL	The relative path to an alternate image if the previous checkbox is checked.

## Server Rule Setup

Server Rule Setup is among the most commonly used of all business rules. Any rule defined in this layer will affect only the data. The developer may code rules in this layer using standard SQL as stored procedures. Rules in this layer can be categorized into one of the following:

1. Constraints: Conditions required for successful data entry or user-defined error message will be prompted.
2. Computation: Typical “A + B = C” scenarios, all mathematical formulae can be entered in this format.
3. Inference: Typical “IF A THEN B” scenarios, if a user-defined condition is met then change designated data accordingly.
4. Action Enabler: Any action that cannot be classified as one of the above. Typically used to initiate an external action.

Rule Type*:	Inference
Screen:	
aster Table:	Action Enabler
xec Order*:	Computation
ture Name*:	Constraints
	Inference

The above rules are mutually exclusive, comprehensive and can be initiated by any combination of “Update”, “Insert or “Delete” actions. Developers may even choose to fire individual rules immediately before or after these standard actions.

```

Modified By: Nelson Lin On: 2/10/2007 5:05:13 PM Last Generated: 2/10/2007 5:05:13 PM

To use any server rule effectively, users must first create the stored procedure, and then use the Query Analyzer feature to assure that the stored procedure functions properly. The “Synchronize to Db” icon will alert the user to any syntax error.

The stored procedure created will be called from within the Data Access layer.

Schema Characteristic	Description
Rule Name	The unique name for a server rule (100 characters or less).
Description	The detail description for the server rule.
Rule Type	The rule type (constraint, computation, inference or action enabler) for the server rule.
Screen	The screen to apply this server rule to.
Master	Check if this server rule applies to each row of the master table; uncheck if rule applies to detail table.
Exec Order	The order of execution for this server rule. A re-order is automatic if last digit is non-zero or ignored.
Procedure Name	The procedure name of this server rule (20 characters or less).
Parameter Names	The parameter names used in the stored procedure (comma-delimited, if needed.)
Parameter Types	The data types describing the above parameters (comma-delimited, if needed.)
Calling Parameters	The matching calling parameters with trailing table ID and comma-delimited, if any. LUser.?, LCurr.? and Config.? can be used.
On Add	Check if this initiates when adding a row.
On Update	Check if this initiates when updating a row.

On Delete	Check if this initiates when deleting a row.
Before CRUD	Check if this initiates before Insert, Update or Delete.
S.Procedure	This content will be executed, as Stored Procedure (SQL) on the relevant database(s) when field is not empty.
Modified By	Identifies the user that last modified this.
On	Captures the date and time of last modification for tracking purposes.
Last Generated	This stored procedure was last generated on this date.
Synchronize from Db	Click here to obtain the stored procedure from the physical database.
Synchronize to Db	Click here to synchronize this stored procedure immediately to the physical database.

Business rules written on this layer are documented and are readily accessible as web services via standard database operations (Add, Update, Delete) by other applications.

### **Server Rule Listing**

Command: Systems -> Server Rule Listing

60	Inference				Adm - Data Table Columns	Update Data Column information by column change	
Y	N	Y		N	Ir_UpdColByCol	Update Data Column information by column change	

## Web Rule Setup

The Web Rule Setup feature is one of the most dynamic rule layers. Developer may choose to define a rule to affect data, user interface or workflow, offering a nearly limitless range of functionality. Here the user can call web services from other systems. Developers may code rules in this layer using Microsoft C# language. The only caution is because it is coded in C# and sometimes developer may code framework dependent code that may not execute properly upon update of operating system or dot net framework. When one of the following available events occurs, the user-defined business rules defined on this layer will be executed upon post-back to the web server. See qualifying events below:

### Available Events

Event	Description
Button Click (after)	The ascx.cs program will initiate code written for this event <b>after</b> any Rintagi-generated code associated with this button is executed.
Button Click (before)	The ascx.cs program will initiate code written for this event <b>before</b> any Rintagi-generated code associated with this button is executed.
Button Click (replace)	The ascx.cs program will initiate code written for this event <b>replacing</b> any Rintagi-generated code associated with this button is executed.
Custom Function/Procedure	This written code is expected to be a well-formed function or procedure in C# code. It will initialize as an independent method inside the corresponding ascx.cs.
Default Value (Folder)	This written code will be generated to the end of the method called ClearMaster (which is called to set all the default values for all the columns of a new record on the tab folder).
Default Value (Grid)	This written code will be generated to the end of the method called Grid_AddNew (which is called to set all the default values for all the columns of a new grid row).
Delete Grid Row (before)	This written code will be executed <b>before</b> any Rintagi-generated code when a grid row is deleted.
Delete Grid Row (replace)	This written code will be executed <b>instead of</b> the Rintagi-generated code when a grid row is deleted.
End of List Selection	This written code will be executed <b>after</b> any Rintagi-generated code when one or more records are selected.
End of Page Load	This written code will be executed <b>after</b> all Rintagi-generated code is executed but <b>before</b> the page is fully loaded.
GridItemDataBound (after)	This event is executed <b>in the middle</b> of loading a data grid. The written code will be executed at the end of this event.
GridItemDataBound (before)	This written code will be executed <b>before</b> this data grid-loading event.
GridItemDataBound (replace)	This written code will <b>replace</b> all Rintagi-generated code in this event.

On Change	<p>Most often used event applies to all screen columns:</p> <ul style="list-style-type: none"> <li>• For dropdown, list-box, combo-box and radio-button column. This written code to be executed before Rintagi-generated code within a SelectedIndexChanged event.</li> <li>• For checkbox. This written code to be executed before Rintagi-generated code within a CheckedChanged event.</li> <li>• For calendar. This written code to be executed before Rintagi-generated code within a SelectionChanged event.</li> <li>• For button and image-button. This written code to be executed before Rintagi-generated code within a Clicked event.</li> <li>• For other types of columns. This written code to be executed before Rintagi-generated code within a TextChanged event.</li> </ul>
On Change (con't.)	

## Web Rule: Tab #1

Command: Rule Tier -> Web Rule

Web Rule

Export RichText New Copy Undo All Save Delete

Screen Criteria:

Screen Column:

Screen Button:

Event\*: Default Value (Grid)

## Web Rule: Tab #2

Web Rule

Export RichText New Copy Undo All Save Delete

Screen: Screen Definition

Screen Definition: Get Default Culture for Screen Title Module: Administration

Main Info Represent

Rule to Apply\*: `drv["CultureId16"] = (new WebRule()).WrGetDefCulture(true);`

This is the well tested rule to be generated onto the program.

Schema Characteristic	Description
Rule Name	The unique name for this web rule (100 characters or less).
Description	The detailed description for this web rule.
Rule Type	The rule type (constraint, computation, inference or action enabler) for this web rule.
Screen	The screen to apply this web rule to.
Screen Criteria	The screen criteria to apply this web rule, if applicable.
Screen Column	The screen column to apply this web rule, if applicable.
Screen Button	The screen button to apply this web rule, if applicable.
Event	The event to fire this web rule as listed above.
Rule to Apply	The well-tested rule to be generated onto the program.

Business rules on this layer will be generated to the modules/\*.ascx.cs in the web tier as shown below:

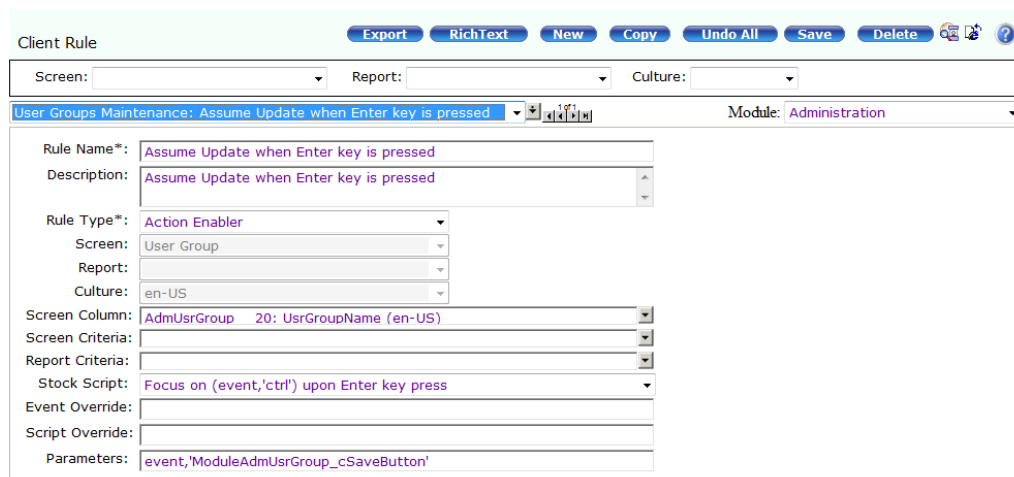

```
private void cAdmScreenGrid_AddNew(DataView dvAdmScreenGrid)
{
    DataRowView drv = dvAdmScreenGrid.AddNew();
    //WebRule: Get Default Culture for Screen Title
    drv["CultureId16"] = (new WebRule()).WrGetDefCulture(true);
    // *** WebRule End *** //
    if (dvAdmScreenGrid.Table.Columns.Contains("_SortOrder")) {int ii = int.Parse((string)Sess;
```

## Client Rule Setup

The Client Rule Setup is used most often to define constraint rules such as “Input Mask”, “User “Interface” or “Workflow”. Although stock rules are readily available, developer may code custom rules in this layer using JavaScript language. There is no post-back when firing these rules. Code generation is not required for any changes made to these client rules and the result is immediate and dynamic.

### Client Rule

Command: Rule Tier -> Client Rule

Client Rule

Export RichText New Copy Undo All Save Delete

Screen: Report: Culture:

User Groups Maintenance: Assume Update when Enter key is pressed Module: Administration

Rule Name\*: Assume Update when Enter key is pressed

Description: Assume Update when Enter key is pressed

Rule Type\*: Action Enabler

Screen: User Group

Report:

Culture: en-US

Screen Column: AdmUsrGroup 20: UsrGroupName (en-US)

Screen Criteria:

Report Criteria:

Stock Script: Focus on (event,'ctrl') upon Enter key press

Event Override:

Script Override:

Parameters: event,'ModuleAdmUsrGroup\_cSaveButton'

Schema Characteristic	Description
Rule Name	The unique name for the client rule (100 characters or less).
Description	The detailed description for this client rule.
Rule Type	The rule type (constraint, computation, inference or action enabler) for this client rule.
Screen	The screen to apply this client rule to, if applicable.
Report	The report that this client side rule applies, if applicable.
Culture	Applies only when the logon user is using this culture.
Screen Column	The screen column this client rule applies to, if applicable.
Screen Criteria	The screen criteria to apply this client rule to, if applicable.
Report Criteria	The report criteria to apply this client rule to, if applicable.
Stock Script	The stock script to apply, if applicable.
Event Override	This shall override the default event of the stock script, if applicable.
Script Override	Overrides the stock script. Use () only for function that has parameters. (Must end with ";", if applicable.) This function should already be tested and declared in UserRule.js.
Parameters	Identifies the column by the "@" sign followed by the ScreenObjId, ScreenCriId or ReportCriId separated by comma, if applicable. Alternatively this can be any ClientID on the page that is enclosed by single quotes.

## Message Center Maintenance

Errors can be trapped on three distinct tiers:

1. Client tier: Achieved via Client Rule from above. An error message will be prompted before the data reaches the web tier.
2. Web tier: Errors are trapped based on the strongly-typed data and input masks that are defined when defining the screen columns. An error message will be prompted before data reaches the data tier.
3. Data tier: Errors are trapped when data reaches the database.

While creating the stored procedure for a server rule, there are two ways to create an error message to be displayed when needed. One method is to code it directly within the stored procedure (in English). This message may not be accessible to other business rules, however.

The other method defines an error message in the “Message Center,” where various human translations for the message are available automatically, and can be referenced by numerous stored procedures.

### Message Center

The screenshot displays the 'Message Center' application. At the top, there is a toolbar with buttons: Export, RichText, New, Copy, Undo All, Save, and Delete. Below the toolbar, there are input fields for 'Message Id:' and 'Source:'. A dropdown menu shows the selected message: 'AllowSelect is only relevant to document merging'. To the right, a 'Module:' dropdown is set to 'Administration'. Below these fields, there is a form for editing a message with fields for 'Message Id:' (43), 'Message Type\*:' (Server Error), 'Source\*:' (Cr\_ChkReportMargins), and 'Description\*:' (AllowSelect is only relevant to document merging). At the bottom, there is a list of messages with columns for 'Culture\*', 'Message\*', and 'Delete'. The first row shows 'U.S. English' and the message 'Please do not Allow Columns Selection unless it is document merging.' with a 'Delete' button next to it.

In order to reference this error message the user must enclose the Message ID (numeric) within curly brackets. For example “{1}” references the error message whose ID is “1” within the database. When defining the message, use {0%S}...{0%S}...{0%D} to refer to first parameter, second parameter, etc. Use the convention “S” for string, “D” for numeric without decimal, etc. However, the positioning digit when referencing this error message is not necessary.

## Language Translation

Rintagi generated enterprise applications are multilingual. Once the application is built in English then labels, tool tips, messages, etc. in many other human languages can be automatically generated with Rintagi. Human translators may inspect and change to preferred phrases and wordings without involving technical staff. For those languages not provided automatically, translation into any Unicode supported language can be accomplished via Rintagi's user-friendly interface.

Each human language can be translated within minutes by the press of a button.

### Translator Screen

<a href="#">Culture Description*</a>		<a href="#">Delete All</a>
U.S. English	<div>Click here to translate all not-yet-translated items from default culture to this culture. This could take more than a few minutes.</div>	
French		
German		<a href="#">Delete</a>
Mainland Chinese		<a href="#">Delete</a>
Mexican Spanish		<a href="#">Delete</a>
<input type="text" value="Russian"/>	 <a href="#">Cancel</a>	<a href="#">Delete</a>
U.K. English		<a href="#">Delete</a>

If the above translation is not satisfactory, built-in screens provide editing capability for each individual translation.

### Translation Editing

Culture*	Column Header	Width	Error Message	Tool Tips
U.S. English	Program Name	110	Please enter a unique User Program Name 20 characters or less.	This is the unique Program Name for this screen 20 characters or less.
French	Nom de programme	110	Veuillez entrer dans les caractères uniques ou moins d'un nom 20 de programme utilisateur.	C'est les caractères uniques ou moins du nom 20 de programme.
Mainland Chinese	节目名称	110	请用户进入一个独特的节目名称或少于20个字.	这20个字是独一无二节目名称或更少.

Each user is designated one or more user-defined user groups and a specific human language with a country-specific locale. Although each user may belong to many user groups, he/she may only choose one human language at a time.

Human language in Rintagi is identified by culture. Each culture code is made up of 2 letter language codes (lower case) derived from the ISO 639 standard, followed by a hyphen, then a country codes (upper case) from ISO 3166. For example, “en-US” represents United States English while “en-UK” represents United Kingdom English. Aside from differences in expression, the country code also determines date and numeric formats, as well as currency representation.

## Document Imaging

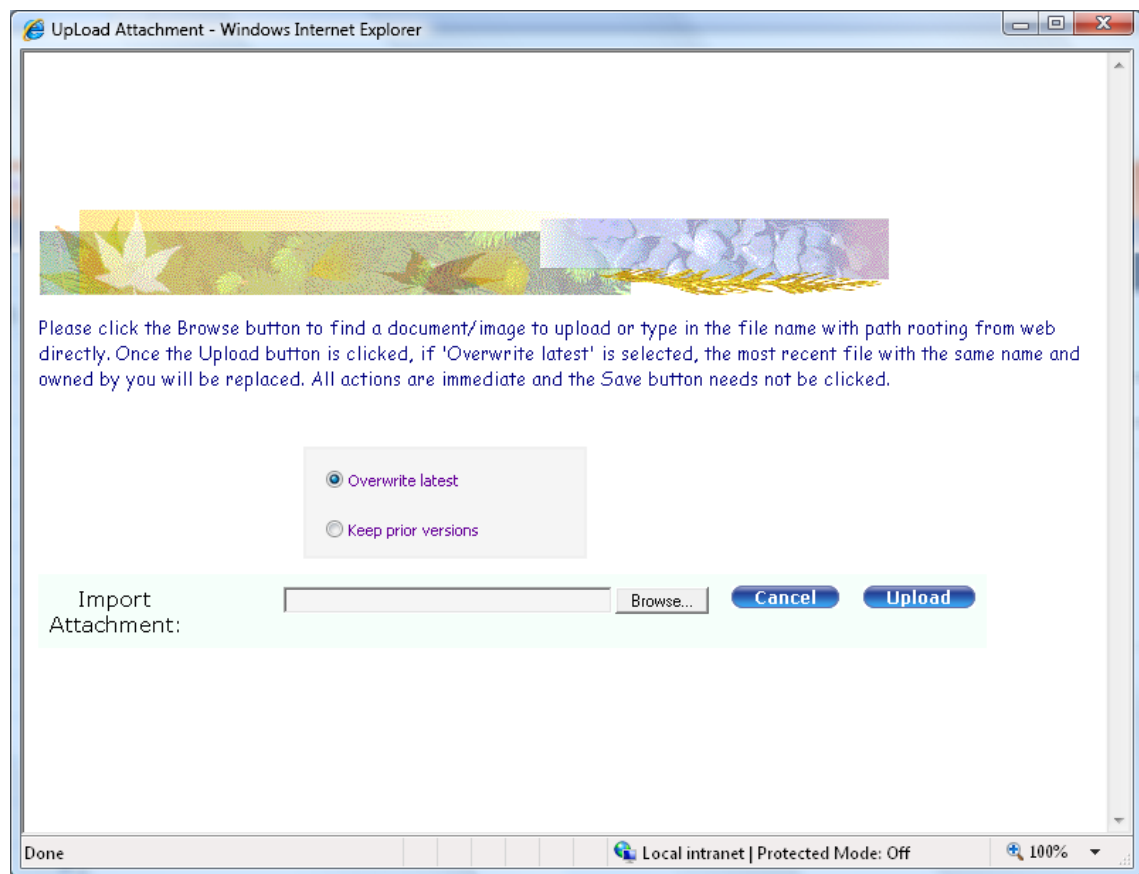

Document imaging cannot be easier because it is a built-in feature for Rintagi generated enterprise applications. It has been tested that on average it would only a second to add this capability to attach to any column or entity. The user-friendly interface Rintagi generated allows users to add unlimited number of pictures, images and documents of any types with version management capability. Each user only may also delete his/ her imported pictures, images and documents.

Below is a sample of the user interface.

### Document Imaging

Click the icon on the left and you would be able to import any picture, image or document of your choice as follow:

Although this feature is currently not available to DataGrid, to make all of these happen, the followings need to be done as a developer:

1. In the table you wish to attach these document images, add a column as a nullable integer;
2. In Screen Column Characteristic select “Document”
3. A table with the same name as the above column is added automatically as depository for all the document images with the following structures:

```
DocId int IDENTITY(1,1) NOT NULL,
MasterId int NOT NULL,
DocName nvarchar(100) NOT NULL,
MimeType varchar(100) NOT NULL,
DocSize bigint NOT NULL,
DocImage varbinary(max) NOT NULL,
InputBy int NULL,
InputOn datetime NULL,
Active char(1) NOT NULL,
CONSTRAINT PK_BillDoc PRIMARY KEY CLUSTERED
```

4. In Screen Column Properties, for the additional column defined in #1 above, specify the following:

- Width: 500px (typical width of a imaging grd);
- Height: 2 (number of documents per page displayed);
- Display Mode: Select Document
- Dropdown Key: ??Doc – DocId (automatic)
- Dropdown Ref: ??Doc – DocName (automatic)

??Doc is the depository table designated for the storage of these documents for this screen column.

5. A virtual foreign key linking the additional column defined in #1 above with ??Doc – DocId is added automatically;
6. The screen is automatically regenerated when accessed, compiled and it's done.
